What is Draw.io?

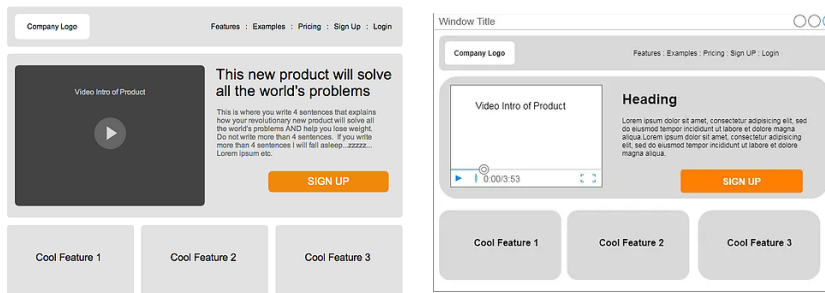

October 26, 2017

Draw.io

I create all of my wireframes and mock-ups with a tool called Draw.io. Draw.io is a completely free online and desktop diagramming tool. With it you can create flow charts, business process models, org charts, network diagrams and more along with wireframes and mock-ups. Draw.io is comparable to other diagramming tools such as Balsamiq, Mockplus, Omnigraffle, Gliffy and Moqups. Here are some wireframes created in Gliffy, moqups, Balsamiq and Mockplus and the same wireframes I created in Draw.io.

Left: wireframe created in Gliffy - Right: wireframe created in Draw.io

Left: Wireframe created in moqups - Right: wireframe created in Draw.io

There are no limits to the number of diagrams you can create. Files can be stored in Google drive, Onedrive, DropBox, Github, Trello or on your hard drive. Draw.io is a collaborative tool. Once you create a diagram you can create a link to share with collaborators. Draw.io has a means of version control.

Draw.to has many prebuilt shapes but you can also import shapes. Draw.io allows you to create your own shape libraries.

Draw.io is an excellent tool if you are a freelancer or a UX designer on a limited budget.
